REASONS FOR ALLOWANCE

- 1. The following is an examiner's statement of reasons for allowance: The independent claims, taking claim 1 as exemplary, contain the limitations "issuing complete instruction bundles toward said execution clusters, wherein at least one complete instruction bundle is issued having an out-of-order alignment" and "the alignment and dispersal circuitry also capable of reordering each of the at least one complete instruction bundle having the out-of-order alignment so as to align the syllables in the complete instruction bundle with correct ones of the lanes". The arguments presented in Applicants' Appeal Brief, filed 01 May 2006, clarifies what had previously been seen by the Examiner as ambiguous in the claim language. Specifically, the fact that the "out-of-order alignment" referred to in the claim language was with regards to time outof-order alignment and that the alignment and dispersal circuitry does reorder the syllables into the correct alignment. The language "out-of-order alignment" could mean time out-of-order alignment, e.g. that instructions are executed out of order, or special out-of-order alignment, e.g. the syllables are not in their proper locations in the instruction due to compression. The language "capable of" also drew questions about whether the invention required this step to be performed as claimed in the alignment and dispersal circuitry. However, Applicants' adamant arguments within the Appeal Brief and supported in the specification clearly shows that the "outof-order alignment" is in regards to executing instructions out of sequential execution order and that the alignment and dispersal circuitry must reorder the syllables for proper execution.
